Handheld Multimeters Discounted for Holiday Sale Starting Now; LCR-Reader and LCR-Reader-MP Available Now

Share Article

Siborg Systems Inc. is offering up to 30% discounts on their best selling devices including LCR-Reader and LCR-Reader-MP until November the 25-th 2018

The Holiday Sale begins November 19, 2018 and ends Sunday, November 25th at 11:59 PM EST

WATERLOO, ONTARIO (PRWEB) NOVEMBER 19, 2018

To kick off the holiday season, Siborg Systems Inc. is hosting a sale on their online store and other sales channels. The sale will include LCR-Reader and the LCR-Reader-MP models, Smart Tweezers and other test devices, task kits and accessories.

Siborg offers testing and debugging tools for Surface Mount Technology that combine a powerful multimeter with a set of tweezer probes.LCR-Reader has become Siborg's best selling device since its release in 2014. The 1 oz. device has a 0.5% basic accuracy and is able to identify components and select the best test parameters before testing. All of Siborg's devices come with sharp, gold-plated tweezer tips that can hold components up to 0204 size.

The LCR-Reader-MP is a new model based on the MP, but with more features and a 0.1% basic accuracy. The MP's features include voltage/current measurement, diode/LED test, oscilloscope mode, frequency meter, Super Cap testing up to 680 mF, pulse counting, AC/DC voltage measurements, and more. One of the main features of the MP is the ability to test components using a 100 kHz test frequency that allows for 1 nH resolution and a 0.01 pF resolution for capacitance. Like LCR-Reader and Smart Tweezer devices, the MP is able to automatically test components with high accuracy by holding a component in between the tweezers; no set-up necessary.

Both devices were based on the original tweezer-multimeter, Smart Tweezers. The - Smart Tweezers ST-5S has a 0.2% basic accuracy and a wide range of features. Siborg also offers a Bluetooth enabled version of the ST-5S that remotely records measurement data in real time. This is an exceptionally helpful function where quality control is concerned. The Bluetooth model is able to connect to PC, Android and iOS, and can be used with programs such as NI Labview.

All devices, LCR-Reader, LCR-Reader-MP, and Smart Tweezers come with an NIST traceable calibration certificate.

Included in the sale are Siborg's other test devices and accessories, including:

> Task Kits: available for LCR-Reader and Smart Tweezers, customers can save with a pre-bundled set that includes a device and accessories.
>
> LCR-Reader Kelvin Probe Connector: this kit turns any LCR-Reader, MP or Smart Tweezers device into a full probe station with 5 attachments. The shielded two-wire connection extends the reach of the probes and allows the device to measure components wider than the tweezer probes.
>
> Smart LED Test Tweezers are an LED tester that uses a 20 VDC output and has variable current ratings. Can be used as tweezer probes for most multimeters using the included cable.

Siborg's up to 30% discount sale ends Sunday, November 25th at 11:59 PM EST. The discounts will be available on the LCR-Reader Store, and Amazon sales channels in USA, Canada, UK, Germany, France, Spain, and Italy.

Some discounts will also be offered by our international representatives:
